

Technology Modernization

Facing a need for forward movement and rapidly evolving security landscape – this organization found itself needing a bottom-up technology modernization.

Challenge:

While the need for forward movement was clear, so were the challenges. Decades of legacy systems, staffing skills and vendor dependencies posed significant hurdles.

- Program needs precluded extended downtime
- High value legacy solutions which needed accommodation
- Budget realities precluded starting over

Solution:

Adopting a journey-focused mindset, vibrant provided a solution which focused on systemic change, continual movement, and a drive towards simplicity.

- Respect existing budget allocations
- Equip staff and leadership to embrace continual movement
- Balancing lifecycles and impact – transition systems at organic points

Impact:

Through persistent effort, entire environment was modernized while incorporating industry leading security and availability

- Achieved without significant increases to Opex/Capex
- Meaningfully simplified environment, reducing support overhead
- Increased digital literacy of entire organization
